

# Densifying System with compaction control

For post-compaction of ground coffee

- Uniform mixing of chaff
- Large range of capacity
- Automatic flap adjustment possible
- High compaction rates

## Densifying System with compaction control

This densifying system has been developed for slight to high post-compaction of ground coffee.

- Easy access and exchange of tools provide for a fast cleaning when the product is changed as well as an uncomplicated adjustment even to particular tasks
- The compactor is available with manual or with automatic, capacity-controlled adjustment system
- Compaction rates of 3 – 30 % are possible, depending on the coffee blend
- Easy to integrate into existing plants
