

PROFILE-ROASTING

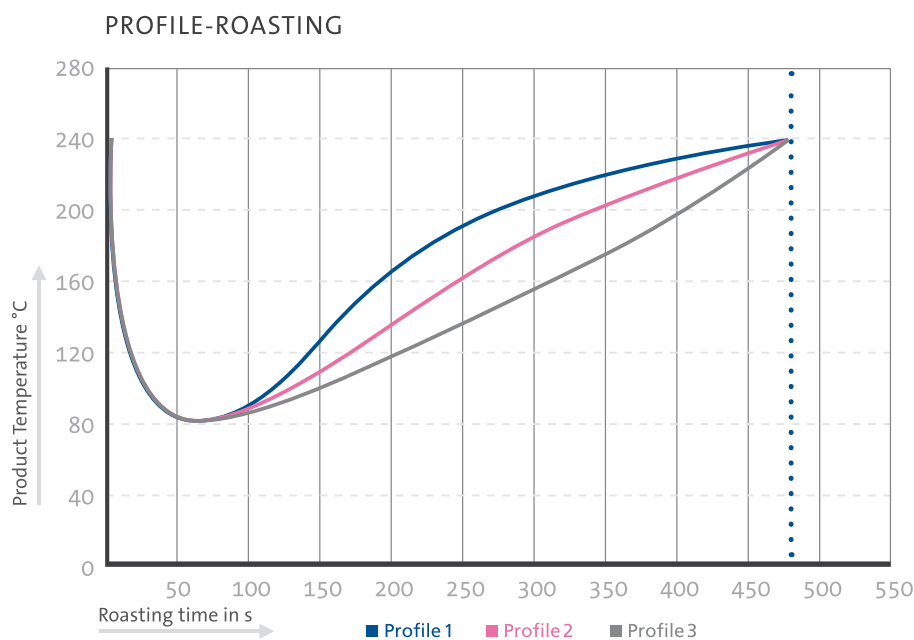

PROFILE-ROASTING

Each coffee blend is unique! It should therefore not be roasted using a standard roasting process. For unfolding the unique flavour of each individual coffee blend the best customized roasting process is needed, as the coffee flavour is not only defined by roasting degree and roasting time, but also by the time during which the bean is exposed to heat. Only this interaction will ensure the best possible roasting profile for each individual blend.

Profile-Roasting by Neuhaus Neotec is your suitable instrument for perfectly adjusting the roasting process to your coffee. Up to 21 different temperature values and air quantities can be set at a respective time by Neuhaus Neotec Profile-Roasting.

You can now be sure that the bean will be exposed to exactly the right heat quantity at the right time which will be required for developing the best possible flavour.

*Neuhaus Neotec Profile-Roasting and
Neuhaus Neotec Copy-Roasting - the perfect combination
for producing your best coffee!*

To give you an idea:
Neuhaus Neotec Profile - Roasting

- optimized roasting for each coffee blend
- perfect control of roasting time, temperature and air quantity
- up to 21 different values (temperature / air ratio-time) can be set according to roasting profile
- best possible results in combination with Neuhaus Neotec Copy-Roasting
